

IBM i Disaster Recovery as a Service (DRaaS) with Global Mirror

WHAT IS RECOVERY POINT IBM i DRaaS?

Recovery Point IBM i DRaaS is a Disaster Recovery as a Service (DRaaS) offering that uses IBM's Global Mirror replication technology to provide data protection and disaster recovery for your IBM i environments between two sites, over extended distances. The service includes continuous data replication (CDP), cloud storage and on-demand IBM Power Systems recovery infrastructure to deliver near zero Recovery Point performance.

Recovery Point IBM i DRaaS is a highly scalable, asynchronous storage replication solution that provides data integrity and data consistency without performance impact on the applications at the primary site. It can be enhanced to a true high availability (HA) solution with IBM's PowerHA SystemMirror. IBM PowerHA allows for event monitoring and planned and unplanned outages, enabling automated failover and failback functionality, multi-site replication and remote backups with IBM BRMS and FlashCopy for your IBM i workloads.

Recovery Point IBM i DRaaS is available as a Fully Managed Service, with 24x7 access to highly credentialed support staff. Hybrid configurations combining your own hosted storage and/or compute with our INcloud infrastructure are supported. All services are delivered from Uptime Institute Tier III certified facilities.

In addition to IBM i DRaaS, Recovery Point offers a full suite of DRaaS solutions for other platforms, including x86, AIX and IBM Z Mainframe so you only need one provider for all of your resilience needs.

PERFORMANCE THAT MEETS YOUR NEEDS

Replication

Cloud Storage

High Availability

WHAT DO YOU GET?

KEY RESILIENCE FEATURES:

High-Speed Recovery

Upon a disaster declaration, virtually any size or number of LPARs, with any amount of compute and storage, can be IPL'd in minutes, depending upon total storage configuration. Network infrastructure can be preconfigured with our INCloud infrastructure to allow rapid user access to the system after the IPL.

Data Loss Avoidance

Real-time, consistent replication ensures changes to the primary system are recorded and applied to the storage at the target site, minimizing your RPO exposure to as little as seconds. Consistent copies of data at the disaster recovery site are created with no impact to applications at your local site.

Enhanced Protection: IBM i DRaaS can retain multiple snapshots per workload to maintain numerous recovery points in pre-defined increments. This means that you are not just protected against datacenter wide issues, such as hardware failures, power issues or natural disasters; you are also protected against logical failures such as database corruptions, viruses, ransomware and faulty application upgrades and user errors. With optional IBM PowerHA and BRMS incorporated into the solution, Recovery Point can also provide Backup as a Service ("BaaS") whereby backups from remote copies of the data can be saved to virtual or physical tape media to provide

"air-gap" security and a long term data archive at one of the Recovery Point tape vaulting locations.

Convenient Testing and Verified Recoverability

You can be assured that your files, applications, and servers can be reliably validated when needed, with simple non-intrusive DR testing on temporary FlashCopy snapshots derived from the Disaster Recovery site target storage. The use of FlashCopy snapshots allows for data replication to continue and avoids the need for timely data resyncs after DR testing.

Total Solution Visibility

You always have complete visibility into your backup and server environments, via redundant solution management interfaces in both your production and recovery environments. Proactive monitoring and built-in alerts will help discover and resolve issues in your IT environment before they have a significant impact. SNMP monitoring and automation will be enabled to ensure data replication is automatically restarted in the event of network outages. With optional IBM PowerHA, all monitoring and automation is configured within the PowerHA solution.

Assured Recovery and Failback

Optional features with PowerHA include support for automatic, unattended failover and failback, cluster integrity with failure detection and node exchange.

KEY SERVICE FEATURES

Cost savings compared to software-based solutions

- Eliminate equipment ownership and obsolescence costs.
- Minimize ongoing monthly costs by acquiring many services on demand.
- Save time with rapid solution deployment via scalable cloud-based target storage.
- No continual updating of library/object/IFS lists, daily auditing jobs or file resyncs, which use valuable CPU resources and manpower.

Proof that the solution works before you buy

- Our no-cost, proof-of-concept testing program establishes confidence in both the solution and our award winning services. You can “try before you buy.”

Fully Managed Service format

- Enjoy 24x7 direct access to Recovery Point's highly credentialed support staff.

Flexible contract terms

- Scale up or scale down as your needs change.

WHY CHOOSE DRaaS POWERED BY RECOVERY POINT?

- Over 20 years of recovery execution experience supporting complex IT environments

- Industry leadership recognized by the leading analysts

- Reliable, resilient solutions delivered from Uptime Institute Certified Tier III facilities

- Support for large heterogeneous environments and legacy systems

- Low cost, national “Last Mile” network with equal access to over 700 carriers

INDUSTRY RECOGNITION

Recovery Point named a leader in the June 2019 Gartner Magic Quadrant for DRaaS, scoring the highest in Ability to Execute for the third consecutive year.

“Recovery Point proposals for recovery of non-x86 workloads and mainframes are consistently the most competitive in pricing and feature capability, while offering no-obligation proofs of concept. Customers applaud Recovery Point's staff in terms of technical expertise, support, ingenuity and executive management involvement.”

[Gartner Magic Quadrant for Disaster Recovery as a Service, June 2019 \(source\)](#)

Recovery Point received the highest product score (3.92 out of 5.0) for the Medium-Complexity Customer Environment use case, highest (3.95 out of 5.0) for Small Enterprise Customer Environment, third highest (3.87 out of 5.0) for Midsize Enterprise Customer Environment and third highest (3.7 out of 5.0) for Low-Complexity Customer Environment.

RECOVERYPOINT

ABOUT RECOVERY POINT

Recovery Point Systems is a nationwide leader in cloud-based business resilience services. Serving commercial organizations ranging from the Fortune 500 to SMBs, as well as Federal, state and local governments, Recovery Point delivers a comprehensive suite of IT resiliency and disaster recovery solutions for heterogeneous environments ranging from mainframe to desktops. Learn more at www.recoverypoint.com.
